Address

Bengaluru, Karnataka

Education

Christ(Deemed to be University)

- B.Tech in Electrical and Electronics Engineering
Completing in 2027

Sheshadripuram
independent PU College

- Second Year Pre-University
College 2022-23

Holy Angels High School

- Schooling - 2020

Skills

- Matlab - Simulink
- E-Plan
- Python(Basic)
- Blender 3D modeling
- AutoCAD
- CodeSys
- Arduino

Certificates

Course on Automation and Data Sciences

Christ University and NSP Global

Developed a Line Following Robot as part of Engineer's day exhibition

Christ University

Matlab/Simulink Bible Course

Udemy

About Me

Electrical and Electronics Engineering Student at Christ University with hands on experience in powertrain design, MATLAB and CAN bus security. Experienced in SIMULINK modeling with ability to design systems like 10 Stage Marx Generator and AM/PM Communication Systems. Passionate about bridging the gap between hardware integration and secure software solutions to solve real-world engineering challenges.

Project Experience

AI-Assisted Voice-Controlled Smart Wheelchair for Enhanced Mobility of Leprosy Patients

As part of the Power-Train team I helped with the wiring of the power circuits for the BLDC motor using the battery pack for direction connection with the motor and a DC-DC converter circuit to supply power to the control circuit(Raspberry Pi)

Symmetric Encryption for Secure Vehicular ECU Communication

Helped Develop "CANoe," a Python-based GUI tool for sniffing and reverse-engineering automotive CAN frames, Implemented a concept security layer using AES-128 symmetric encryption in a virtual Linux environment to protect automotive networks against message injection and replay attacks.

Study on effect of Lightning on the BER and SNR of AM and PM Communication Systems in MATLAB

Created a Simulation of an Amplitude Modulation and Phase Modulation Transmitter and Receiver, injected a standard lightning impulse in order to study the effects of it on the Bit error rate and Signal-to-Noise Ratio on AM and PM waves

Design Patent: Waste-Sorting Dustbin with Ornamental Lid Support (Status: Patent Filed & Under Processing)

Co-invented the ornamental design of a waste-sorting dustbin featuring a rectangular body with softened edges and a top-mounted hinged lid. Developed a unique visual configuration incorporating side-mounted ornamental supports with figurative elements, a front interface with a recessed display and microphone opening, and a visible internal blade configuration.

MATLAB Construction and Simulation of Marx Generator to generate Standard Lightning Impulse

Created and Simulated a 10-Stage Marx Generator in Matlab and configured front-end and tail-end Resistors in order to generate a standard lightning impulse

Creation of a GUI for calculation of Time-of-Use Tariffs from Smart Meters with Demand Side Management Calculation in MATLAB

Used Matlab to create a Graphical User Interface that collects Smart Meter data and determines Time-of-Use tariff for a particular consumer, also suggests optimized load shifting to reduce tariff prices by shifting load from peak-demand time
